Hydro foams and flexible foams for tile installers

Contact us: +49 2645 9523-0

TILE SPONGES AND SPONGE PADS

PUR flexible foam materials, which have a high absorption and retention capacity thanks to their open cellular structure, are used for tile sponges and tile washing boards. Reticulated types, such as our original hydro quality, are used in the professional sector, guaranteeing the highest professional standards and a long useable life.

REPLACEABLE PADS FOR TILE WASHING BOARDS WITH HOOK-AND-LOOP FABRIC

The sponge pad can be attached by simply pressing it onto a sponge board with a hook-and-loop fastening system. It can then be pulled off again just as easily after use. This environmentally friendly and cost-effective way of replacing the pads means there is no need to dispose of the entire board.

HAND SPONGES AND SUPER PADS FOR EPOXY GROUTING

When it comes to grouting with epoxy resins, extraordinarily robust specialty sponges made of highly tear-resistant PUR prepolymer are used. In contrast to other flexible foams, this material is resistant to synthetic resins. Super pads made of scouring non-wovens are also used for epoxy grouting and for removing tough residues and stains.
